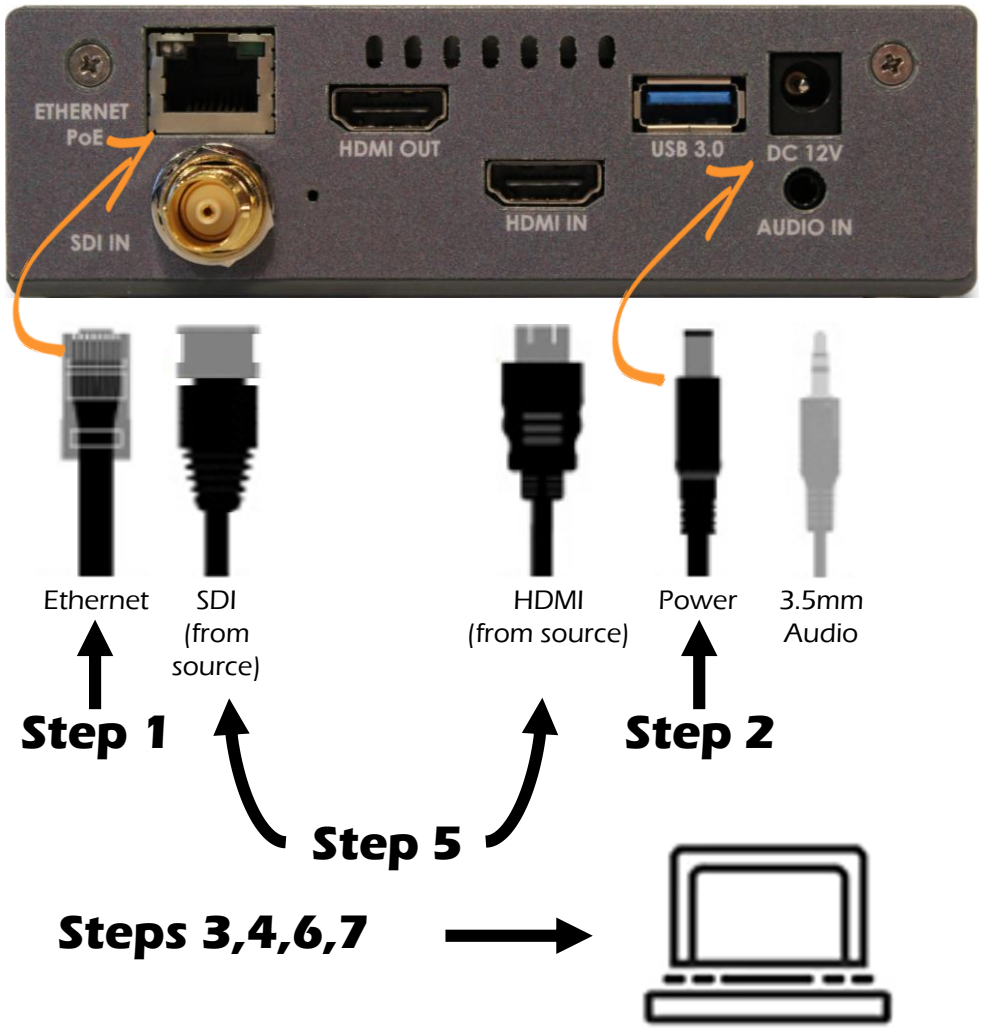
videon



Shavano 4K

Setup Instructions

Step 1 Connect Shavano to your network using an Ethernet cable.

Step 2 Connect Shavano to power using the provided 12V power supply. It will automatically turn on once power is supplied.

Step 3 Insert the provided USB stick into a computer connected to your network and open the *Setup* folder. (USB stick contents are also available at kb.videon-central.com)

Step 4 Select the file corresponding to your operating system and install the Discovery Application. Next, run the application and click *Open* to access the Streaming Dashboard.

Step 5 Connect a video source, such as a camera, to Shavano using the HDMI IN or SDI IN port. When the video source is active, the *Source* light on the front panel will turn on.

Step 6 In the Streaming Dashboard, click the *Configure* button under *Output Settings* and choose the tab corresponding to your desired stream type.

Step 7 Follow the on-screen instructions for your chosen stream type or visit the Knowledge Base at kb.videon-central.com for step-by-step streaming guides.
